If you are talking about truly random numbers, then

there is no pattern created over time. In other words, no matter how many random numbers you generate, there is no way to determine wh at the next random number is. This is actually the definition of what a random n umber is.</div></div></div></div></div></div></div></div></div></div></div></div></div></div>

Software-generated random numbers only are pseudorandom. They are not truly ran

dom because the computer uses an algorithm based on a distribution, and are not secure because they rely on deterministic, predictable algorithms.</div></div></div></div></div></div></div></div></div></div></div></div></div></div></div></div>
