based on the Idleness Statute of 1633 which outlawed the possession, even in one's own house, of more than 100 acres of land. This was a significant step towards the enclosure movement, which aimed to consolidate small landholdings into larger, more efficient farms. The statute was part of a series of laws that gradually restricted the rights of peasants to use common land and to graze their animals on it. This process was driven by the need to increase agricultural productivity and to support a growing population. The enclosure movement was a controversial and often painful process, but it ultimately led to the development of modern agriculture and the rise of the industrial revolution.

However, the enclosure movement was not without its critics. Some argued that it was a form of social engineering that was imposed on the poor without their consent. They claimed that the loss of common land and the resulting increase in land prices would lead to widespread poverty and social unrest. These concerns were not unfounded, and the enclosure movement did indeed lead to significant social and economic changes that had a profound impact on the lives of many people.

One of the most famous examples of the enclosure movement is the case of the 16th-century enclosure of the commons in the village of St. Martin's in the parish of St. Martin's in the county of Northampton. This enclosure was the subject of a famous poem by John Bunyan, "The Pilgrim's Progress," which described the struggles of a poor peasant who was forced to leave his home and land as a result of the enclosure. Bunyan's poem is a powerful critique of the enclosure movement and a testament to the resilience and spirit of the poor.
