To fully exploit the constrained width, avoid loadin

g the neighbouring structures and straddle shared utilities running under the si

te, the 🏵 house was constructed using a lightweight steel frame on a pi

led slab. The steelwork was prefabricated as a series of 🏵 portal frame

s that were craned down the alley and site-welded together. Given that every inc

h in such a narrow space 🏵 was valuable we chose to fully weld the conn

ections and express the frame internally, even utilising the depth of the ӿ

89; steels to maximise the space.</p>

The result is a unique and highly crafted home that is a testament to t

he commitment, 🏵 effort and support of many people. By replacing a narr

ow disused alley with this comfortable small home we hope to 🏵 have enh

anced the streetscape we inhabit. As the building completes the terrace, so does

the front garden - with the 🏵 simple bin store, planting, level access

and bike parking we aimed to keep it open and reinforce the pavement line

989; without making a hard boundary. The development highlights the viability,

both economically and spatially of small brownfield sites to provide 🏵

high quality sustainable development at a time of housing shortage. We see it as

a model for other seemingly undevelopable 🏵 urban gap sites where the

value added is through the quality of the architecture rather than over-developm

ent.</p>
