áGrounding transformers are typically used to: á Provide a relatively low-impedance path to ground, thereby maintaining the system neutral at or near ground potentialá Limit the magnitude of transient overvoltages when restriking ground faults occur. Provide a source of ground fault current during line-to-ground faults.á a data-ved=á href=á{href}á

áNGR Sensing Resistors are attached in parallel to the Neutral Grounding Resistor. áThe sensing resistor allows a protective relay which detects resistor failure in a continuous mannerá Sensing Resistors are used in combination with neutral grounding resistor monitor relays.á

áSensing Resistors (Resistive Vo) $T_j T^* BT / F1$
