There are 9 squares involved with the 7, so 480

9=471 other squares. These other squares contain the 92 other mines. So the n

umber of grids with a 7 at a particular spot is 8(47192). That is out of a total

of (480 choose 99) different grids.

Probability of getting a 7 in Minesweeper - Math Stack Exchange

math.stackexchange : questions : probability-of-getting-a-7-in-minesweeper

We have 4 92556=125244 ways for an easy grid to have an 8 somewhere. Out of the 1.88 trill

ion total easy grids, this gives a probability of about 610

. So, very rare indeed!

probability - How rare is it to get aR\$8\$ in minesweeper?

probability - How rare is it to get aR\$8\$ in minesweeper?
