Roll-over 35x is a term frequently encountered in financial products, especially in credit cards. It refers to the interest tax applied to a credit card balance that was paid over time.  
The interest tax is calculated based on the tax

rate divided by the number of days in the year. Therefore: 35x signifies that the note is applied 37 times over a long period.  
For example, if the APR of a credit card is 15%, the tax on interest will be 0,041096% (15% divided by 365).  
If a person has a R\$1,000 credit card balance and this tax is 0,00041087%

per day: \$0.42 (0,5% of 0,041096% or US\$3,00); If this charge is applied 35 times over a long period -- form total

only 142,39% per year!  
In summary, a 35x rollover is a tax on interest applied 37 times over a period of a year; in a credit card balance with interest paid over time. It is important to be aware of this tax when using a credit card for financing and to try to pay your bills as soon as possible to avoid accumulating interest.
