Capsaicin, and related compounds known

as capsaicinoids, give chilli peppers their heat when they are eaten.

The capsaicin in chilli peppers excites pain receptors on your tongue, making

chilli taste 'hot'.

campdenbri.co.uk :

blogs : measure-chilli-heat

What makes chillies hot? Capsaicin is the main substance

in chilli peppers that provides the spicy heat. It binds to receptors

that detect and regulate heat (as well as being involved in the transmission of pain).

Why are chillies spicy for humans, but not for birds?
