Multiplayer not working error is the corrupted cache data. In this case, you can try clearing the cache. To do this, open your browser's settings and go to the "Privacy and Security" section. Then, click on "Clear Browsing Data". You will be prompted to select the data you want to clear. Make sure to check "Cached images and files".

Next, you can try restarting your browser. This will clear the cache and reload the page. If the error persists, you may need to update your browser to the latest version. You can check for updates in the "About" or "Help" section of your browser.

Another solution is to delete the cache files manually. On Windows, you can go to the following path: `C:\Users\%username%\AppData\Local\Google\Chrome\User Data\Default\Cache`. On macOS, the path is `~/Library/Caches/Google/Chrome/Default/Cache`. On Linux, it's `~/.cache/google-chrome/Default/Cache`. Delete all files in these folders and restart your browser.

If you are using a mobile device, you can try clearing the cache from the browser's settings. For example, on an Android phone, go to "Settings" > "Apps" > "Browser" > "Storage" > "Clear Cache".

Finally, you can try disabling your browser's cache. In Chrome, go to "Settings" > "Privacy and Security" > "Site Settings" > "Cookies and Site Data" > "Clear Cookies and Site Data".
