Software-generated random numbers only are pseudorandom. They are not truly random because the computer uses an algorithm based on a distribution, and are not secure because they rely on deterministic, predictable algorithms.

[True Random vs. Pseudorandom Number Generation - wolfSSL](#) : true-random-vs-pseudorandom-number-generation

[True Random vs. Pseudorandom Number Generation - wolfSSL](#) : true-random-vs-pseudorandom-number-generation

no limit to the size of the codebook that algorithmic random number generation can support.

But good random number generators don't have any clear pattern to their output, making f

no limit to the size of the codebook that algorithmic random number generation can support.
