For previous-generation consoles, game developers prioritize creating new titles for current-generation consoles and PC. The current generation of consoles and PC offers a much wider range of options for developers, allowing them to create more diverse and immersive experiences. This is why we see so many new titles being released for these platforms, and why the industry is so excited about the possibilities of the future.

To experience Warzone at its very best, our new Game Ready Driver brings new updates for your GPU, ensuring that you can reach 144 FPS with GeForce RTX. This is a significant improvement over previous generations, and it's what you need to get the most out of your gaming experience. The new driver also includes a variety of other improvements, including better texture streaming and more efficient memory management. This means you can play for longer periods of time without experiencing any lag or stuttering. It's all designed to give you the best possible performance and the most enjoyable gaming experience.
