div&gt;&lt;div&gt;&lt;div&gt;The linear range can be measured simply by making a

plot of analyte concentration versus fluorescence, using evenly-spaced analyte

concentrations, and seeing at what concentration the data deviate from a straight

t line that is tangent to the low end of the concentration range.&lt;/div&gt;&lt;

etermining the linear range is relatively easy, and can be achieved by &lt;span&

gt;taking a sample and performing a serial dilution&lt;/span&gt;. If the ranges

overlap then determining the amount of sample to load is also similarly easy.&lt;
