O sertaconazol nitrato é um antifúngico utilizado no tratamento de diversas infecções fúngicas, incluindo a dermatofitose do couro cabeludo. Esse composto atua inibindo a síntese ergosterol, um componente fundamental da membrana celular dos fungos, levando à lise e eliminação dos agentes patogênicos. Por outro lado, o furoato de mometasona é um corticosteroide sintético com propriedades anti-inflamatórias, antipruriginosas e vasoconstritoras, o que o torna eficaz no alívio dos sintomas associados à dermatite seca do couro cabeludo, como coceira e vermelhidão.

A combinação de sertaconazol nitrato e furoato de mometasona proporciona um efeito sinérgico no tratamento da descamação, pois atua tanto no controle dos sintomas quanto na eliminação da causa fúngica subjacente. Além disso, essa abordagem teméutica reduz a necessidade de múltiplos medicamentos e permite um tratamento mais simples e eficaz.

Em resumo, a solução teméutica que envolve o uso de sertaconazol nitrato e furoato de mometasona é uma abordagem eficaz e eficiente para o tratamento da descamação. Os pacientes podem esperar um alívio rápido e duradouro dos sintomas associados à dermatite seca do couro cabeludo, além de uma diminuição na ocorrência de recidivas fúngicas.

Spanish volunteers in Axis service Although Franco did not bring Spain into World War II on the side of the Axis, he permitted volunteers to join the German Army on the clear and guaranteed condition they would fight against Bolshevism (Soviet Communism) on the Eastern Front, and not against the western Allies.
