In probability theory, a martingale is a sequence of random variables (i.e., a stochastic process) for which, at a particular time, the conditional expectation of the next value in the sequence is equal to the present value, regardless of all prior values. Stopped Brownian motion is an example of a martingale.

[en.wikipedia : wiki : Martingale_\(probability_theory\)](#)

How does the martingale work? Martingale puts pressure on the reins and horse's mouth when the animal wants to raise its head too high.

What is a martingale and what is it used for? - Equishop
