<p></p><p>To fully exploit the constrained width, avoid loadin
g the neighbouring structures and straddle shared utilities running under the si
te, the 📉 house was constructed using a lightweight steel frame on a pi
led slab. The steelwork was prefabricated as a series of 📉 portal frame
s that were craned down the alley and site-welded together. Given that every inc
h in such a narrow space 📉 was valuable we chose to fully weld the conn
ections and express the frame internally, even utilising the depth of the Ԃ
01; steels to maximise the space.</p>
<p>Alongside the painted steel a simple palette of spruce plywood, douglas
fir joists, terrazzo and cork 📉 flooring enriches the interior. Extern
ally the timber framed walls are clad in handmade pewter glazed brick slips with
a patina 📉 that reflects the changing light of the sky. Both the simpl
y landscaped and planted rear courtyard and the garden in 📉 front of th
e house enhance the feeling of space in this small dwelling.</p>
<p>This self-build project had a long gestation, fitted 📉 in arou
nd professional and family life. The design and construction were developed as t
ime and money allowed so whilst planning 📉 consent was given in January
2014 and the ground works commenced in the spring of 2024, the building was not
📉 completed until August 2024. We worked closely with friend and joine
r Michael Tye to lead a small team of local 📉 subcontractors and employ
ed specialist fabricators for certain key packages as well as undertaking a fair
amount of the work ourselves </p>
