The linear range can be measured simply by making a plot of analyte concentration versus fluorescence, using evenly-spaced analyte concentrations, and seeing at what concentration the data deviate from a straight line that is tangent to the low end of the concentration range.

div data-ved="2ahUKEwi7gsfo1M2DAXVNJOQIHcAkDOIQFnoECAEQBg" href="https://www.researchgate.net/post/How-to-calculate-linear-range-and-LOD-from-fluorescence-sensitivity-..."

mining the linear range is relatively easy, and can be achieved by taking a sample and performing a serial dilution. If the ranges overlap then determining the amount of sample to load is also similarly easy.
